This edited volume provides an authoritative and comprehensive view of changing oil markets through informative discussions on global oil reserves, production and consumption trends, futures markets, refining, the political economy, and global environmental concerns. The 4th International Works

hop on Databases in Networked Information Systems (DNIS 2005) was held on March 28-30, 2005 at the University of Aizu in Japan. Economics is considered as the commodity-financial exchange process. Two parallel networks are processed: commodity-production and financial. Economics is the set of the production-consumption elements and the channels or connections among them. Market is the transference process through the channels. The financial network processing is the reflection of the commodity-production network

processing. The couples of the production and financial equations are based on the algebra of the multi-dimensional matrices. Different levels of the economics (micro-, macro-, global-) have the similar structures of difference dynamic equations. This contributed volume examines the far-reaching effects of the weakening of OPEC's cohesion and influence in the 1980s, the resulting decline of oil prices, and the accompanying economic reversals. These events resulted in both fortune and

misfortune for oil users and producers and dramatically changed energy economics worldwide. Moreover, as revealed in this volume, the decade of the 1980s demonstrated that oil producers and oil importers can prosper in an atmosphere of mutual respect, cooperation, and moderation. The work examines major oil-related topics such as the experiences of OPEC and non-OPEC oil suppliers in the 1980s, adjustment and response of oil importers to changes in the oil market, the impact of oil price changes on both the developed and

developing world, and possible future developments in the global oil market. This volume will be of interest to scholars of energy and international economics, as well as professionals in the area of energy development and markets. In concluding his three volume series of reflections on the Sunday Gospels, Father Dowling throws light in a special way on the nuances to be found in the Gospel of Luke, which plays such a predominant role in Cycle C of the liturgical readings. Ever gender-conscious in his presentation of the teachings of Jesus, Luke made a special effort to follow a lesson in which a man was

the protagonist with another in which a woman took the lead. Struck by Our Lord's predilection for the poor, the outcast, the sick and the sinner, Luke highlights the kindness, the compassion, the empathy and the forgiving nature of Jesus. Drawing on his years of study and long experience as a homilist in a variety of settings, Father Dowling educates and inspires with these brief yet profound reflections in the hope of enriching the spiritual lives of those who make use of them. Homilist and average parishioners will find much to ponder here. All will appreciate the addition of the

topical, liturgical and scriptural indices to his three-volume series present in this third book. Tough Test Questions? Missed Lectures? Not Enough Time? Recent upheaval in the global energy system - dramatic increases in demand led largely by developing countries, significant decreases in supply

as a result of local or regional conflicts, and the growing nexus between the burning of hydrocarbons and climate change - has unsettled long-held notions of energy security. For many years, transatlantic cooperation helped undergird the system's stability, but Europe and North America have drifted apart in several key ways, potentially undermining the search for energy sufficiency, surety, and sustainability. Will the transatlantic partners continue on separate paths in the face of dramatic change in the global energy system, or does the breadth and depth

of the challenges they confront compel them to work more closely together? In this edited volume, experts from across Europe and North America - including advisors to the executive and legislative branches of both the EU and the United States, to senior military commanders, and to major international organizations and companies - examine the most salient facets of the transatlantic energy relationship and discern whether that relationship is characterized by growing convergence or divergence. This book was based on a special issue of the Journal of Transatlantic

Studies. Confusing Textbooks? Missed Lectures? Not Enough Time? Fortunately for you, there's Schaum's Outlines.
