Jonathan Ward takes the reader deep into the facilities at Kennedy Space Center to describe NASA's first computer systems used for spacecraft and rocket checkout and explain how tests and launches proceeded. Descriptions of early operations include a harrowing account of the heroic efforts of pad workers during the Apollo 1 fire. A companion to the author's book Countdown to a Moon Launch: Preparing Apollo for Its Historic Journey, this explores every facet of the facilities that served as the base for the Apollo/Saturn missions. Hundreds of illustrations complement the firsthand accounts of more than 70 Apollo program managers and engineers. The era of the Apollo/Saturn missions was perhaps the most exciting period in American space exploration history. Cape Canaveral and Kennedy Space Center were buzzing with activity. Thousands of workers came

to town to build the facilities and launch the missions needed to put an American on the Moon before the end of the decade. Work at KSC involved much more than just launching rockets. It was a place like none other on Earth. Technicians performed intricate operations, and hazards abounded everywhere, including lightning, fire, highly-toxic fuels, snakes, heat, explosives, LOX spills, and even plutonium. The reward for months of 7-day workweeks under intense pressure was witnessing a Saturn V at liftoff. For anyone who ever wished they had worked at Kennedy Space Center during the Apollo era, this book is the next best thing. The only thing missing is the smell of rocket fuel in the morning. Like the first edition, the revision of this successful Handbook responds to the growing need for specific tools and methods for testing and evaluating human-system interfaces. Indications are that the market for information on these tools and applications will continue to grow in the 21st century. One of the goals of offering a second edition is to expand and emphasize the application chapters, providing contemporary examples of human factors test and evaluation (HFTE) enterprises across a range of systems and environments. Coverage of the standard tools and techniques used in HFTE have been updated as well. New features of the Handbook of Human Factors Testing and Evaluation include: *new chapters covering human performance testing, manufacturing ergonomics, anthropometry, generative design methods, and usability testing; *updated tools and techniques for modeling, simulation, embedded testing, training assessment, and psychophysiological measurement; *new applications chapters presenting human factors testing examples in aviation and avionics, forestry, road safety, and software systems; and *more examples, illustrations, graphics and tables have been added. The orientation of the current work has been toward breadth of coverage rather than in-depth treatment of a few issues or techniques. Experienced testers will find much that is familiar, as well as new tools, creative approaches, and a rekindled enthusiasm. Newcomers will discover the diversity of issues, methods, and creative approaches that make up the field. In addition, the book is written in such a way that individuals outside the profession should learn the intrinsic value and pleasure in ensuring safe, efficient, and effective operation, as well as increased user satisfaction through HFTE. Committee Serial No. 3. Investigates causes of Jan. 27, 1967 Apollo 204 accident when three astronauts lost their lives. Includes testimony by Thomas R. Baron, author of a report highly critical of spacecraft management at Kennedy Space Center; volume2,pt.1: Contains text of accident investigation report to NASA by the Apollo 204 Review Board; volume 2, part 2: Contains Appendix C (continuation) and part of Appendix D to Final Report of Apollo 204 Review Board, which investigated the Jan. 27, 1967 Apollo 204 accident at Kennedy Space Center, in which three astronauts died; volume 2, part 3: Contains Appendices D

(continuation), E, F, and G to the formal report of investigation by the Apollo 204 Review Board of the Apollo 204 accident at Kennedy Space Center on Jan. 27, 1967, when three astronauts perished; volume 3: Describes corrective modifications performed on Apollo spacecraft to prevent a repetition of the Apollo 204 accident, during which 3 astronauts perished at Kennedy Space Center on Jan. 27, 1967. As a result of its investigation, the Safety Board makes recommendations to the Federal Highway Administration; the California Department of Transportation; the city of Burbank, California; the American Association of State Highway and Transportation Officials; the Institute of Transportation Engineers; the National Committee on Uniform Traffic Control Devices; the National Committee on Uniform Traffic Laws and Ordinances; and the Transportation Research Board. Applied Ergonomics is a concise text focusing on the practical applications of ergonomics and is derived from the annual, ground-breaking, successful conference of the same name. This is not a conference proceedings but a text of applications, filling a niche in the ergonomics professional market for a book that is strong on the applications side o Written for both veterans and those considering their first rail journey, this guide is an expansive resource for train travel and the broader world of rail transit in the United States and Canada. Bridging the past with the present, the handbook explores the origins of the rail systems, the monumental task of building America's first trans-continental railroad, passenger and freight railroad operations, and the differences between the various lines. The new edition includes updated information on ticketing procedures, routes, Amtrak's simplified fare structures, and the explosion of railroad-related data such as schedules and ticket purchase options available on the internet. In addition to offering time-tested advice on finding the lowest fares, avoiding pitfalls, packing for an overnight trip, when to board, and whom to tip and how much, the reference presents a number of rail itineraries-from day trips to see the colors of the fall season to lengthy journeys that will take more adventurous travelers around the entire country. A perspective on high-speed lines-such as proposed links between Los Angeles and San Francisco and Chicago to St. Louis-envision the future of rail transportation. The Assistant Conductor Passbook(R) prepares you for your test by allowing you to take practice exams in the subjects you need to study. Thousands of workers labored at Kennedy Space Center around the clock, seven days a week, for half a year to prepare a mission for the liftoff of Apollo 11. This is the story of what went on during those hectic six months. Countdown to a Moon Launch provides an in-depth look at the carefully choreographed workflow for an Apollo mission at KSC. Using the Apollo 11 mission as an example, readers will learn what went on day by day to transform partially completed stages and crates of parts into a ready-to-fly Saturn V. Firsthand accounts of launch pad

accidents, near misses, suspected sabotage, and last-minute changes to hardware are told by more than 70 NASA employees and its contractors. A companion to Rocket Ranch, it includes many diagrams and photographs, some never before published, to illustrate all aspects of the process. NASA's groundbreaking use of computers for testing and advanced management techniques are also covered in detail. This book will demystify the question of how NASA could build and launch Apollo missions using 1960s technology. You'll discover that there was no magic involved - just an abundance of discipline, willpower, and creativity. The Assistant Conductor Passbook(R) prepares you for your test by allowing you to take practice exams in the subjects you need to study.
