Drawing on more than two years of participant observation in the American Midwest and in Madagascar among Lutheran clinicians, volunteer laborers, healers, evangelists, and former missionaries, Conversionary Sites investigates the role of religion in the globalization of medicine. Based on immersive research of a transnational Christian medical aid program, Britt Halvorson tells the story of a thirty-year-old initiative that aimed to professionalize and modernize colonial-era

evangelism. Creatively blending perspectives on humanitarianism, global medicine, and the anthropology of Christianity, she argues that the cultural spaces created by these programs operate as multistranded "conversionary sites," where questions of global inequality, transnational religious fellowship, and postcolonial cultural and economic forces are negotiated. A nuanced critique of the ambivalent relationships among religion, capitalism, and humanitarian aid, Conversionary Sites draws important connections between religion and science, capitalism and charity, and the US and the Global South. How to Read a Folktale offers the first English translation of Ibonia, a spellbinding tale of old Madagascar. Ibonia is a folktale on epic scale. Much of its plot sounds familiar: a powerful royal hero attempts to rescue his betrothed from an evil adversary and, after a series of tests and duels, he and his lover are joyfully united with a marriage that affirms the royal lineage. These fairytale elements link Ibonia with European folktales, but the tale is still very much a product of Madagascar. It contains African-style praise poetry for the hero; it presents Indonesian-style riddles and poems; and it inflates the form of folktale into epic

proportions. Recorded when the Malagasy people were experiencing European contact for the first time, Ibonia proclaims the power of the ancestors against the foreigner. Through Ibonia, Lee Haring expertly helps readers to understand the very nature of folktales. His definitive translation, originally published in 1994, has now been fully revised to emphasize its poetic qualities, while his new introduction and detailed notes give insight into the fascinating imagination and symbols of the Malagasy. Haring's research connects this exotic narrative with fundamental questions not only of anthropology but also of literary criticism. This is the first and only cookbook on cuisine from Madagascar. Donenfeld traveled there in 2005 and stayed for five months. She stayed with various families and lived in many parts of the island. The book is a cohesive collection of recipes from all parts of the island-highlands and lowlands, mountains and beaches, north and south. She discusses the importance of rice, give recipes for street foods, and give recipes for everyday home cooking as well. Malagasy cuisine is quite rich, with an abundance of vanilla, coconut, and seafood. Donenfeld endearingly tells of her travels through her recipes, introducing us to family and friends she, and surely readers, will never forget. It was a journey for her to write this book and now her readers will be able to take part in the journey as they read and prepare the recipes. Scientific

Essay from the year 2013 in the subject Business economics - Economic Policy, grade: 1,0, San Diego State University (College of Business Administration), course: Global Supply Chain Management, language: English, abstract: Are global supply chains a threat or an opportunity for developing countries? Does globalization rather exploit poor farmers or does it have beneficial effects? This paper addresses this questions and shows recent evidence how the poor in Madagascar could benefit from integration in global supply chains. This book is part of our World Oral Literature Series in conjunction with the World Oral Literature Project. The worldwide prominence of snakes in religion, myth, and folklore underscores our deep connection to the serpent - but why, when so few of us have firsthand experience? The surprising answer, this book suggests, lies in the singular impact of snakes on primate evolution. Predation pressure from snakes, Lynne Isbell tells us, is ultimately responsible for the superior vision and large brains of primates - and for a critical aspect of human evolution. Bradt's fully illustrated wildlife guides focus on regions of the world particularly celebrated for their amazing and often unique species. With spectacular photography or exclusive watercolour drawings throughout, each visitors' guide provides an introduction to the region's principal flora and fauna alongside suggested wildlife itineraries, practical information on when to go and what to take and photography tips. Written in a deliberately engaging way, they offer something different from dry field guides, and will appeal to the interested layman as much

as the wildlife devotee. Ideal as a lightweight companion to any wildlife trip they also make a handsome souvenir. Beautifully illustrated with full-colour photographs throughout, Madagascar Wildlife is a celebration of the unique fauna of a remarkable island. Featuring over 250 species - from lemurs to millipedes - this guide is ideal for natural history enthusiasts and travellers alike. Newly discovered species and recently protected habitats are all covered in this fully revised edition. Also included is practical advice on visiting the key national parks and reserves plus special features on the evolution, camouflage, night-time wildlife and conservation issues. This atlas offers anatomical descriptions of 19 *Dalbergia* and 31 *Diospyros* species, most of them endemic to Madagascar. Each species is illustrated with color micrographs of double-stained sections through the xylem, bark, and pith of stems, branches, and twigs. Further, a photograph of each plant and information on its height, DBH, habit, and geographical and elevational distribution in Madagascar are included. *Dalbergia* and *Diospyros* species provide highly-priced woods, which are intensively traded across the world and therefore highly endangered by illegal trade and harvesting. This book represents a response to the action plan for *Diospyros* and *Dalbergia* species regarding the establishment of a reference collection and reliable identification system for

species listed by CITES, the Convention on International Trade in Endangered Species of Wild Fauna and Flora. Bringing together a wealth of material recently collected in different biogeographical regions of Madagascar and identified by the Missouri Botanical Garden, the book will appeal to plant scientists, taxonomists and practitioners involved in wood identification, and will help to safeguard the legacy of precious wood trading through proper identification. Long before there were cobblestone streets along the Charleston battery, there was rice and there were slaves--the twin pillars upon which colonial Carolina wealth was built. But by the Civil War both began to crumble, along with the planter aristocracy they supported. Seed from Madagascar chronicles the linked tragedies of the prominent Heyward family and South Carolina's rice industry while underscoring the integral role African Americans played in the fortunes of the planter class and the precious crop. As much about race as about rice, Duncan Clinch Heyward's account describes the master-slave relationship, the planting and marketing of rice, and the changes wrought by the Civil War. Peter Coclanis's vivid introduction to this Southern Classics edition places Heyward's chronicle in its historical and cultural context, making Seed from Madagascar as important today as when it first appeared in the 1930s. En face, English and French. There is currently in Madagascar a rich literary

production (short stories, poetry, novels, plays) that has not yet reached the United States for lack of diffusion outside the country. Until recently, Madagascar suffered from political isolation resulting from its breakup with France in the 1970s and the eighteen years of Marxism that followed. With little hope that their voices would be heard outside the island, writers nevertheless have continued to express themselves in French (alongside a literature written in the Malagasy language). Malagasy literature in French had begun in the colonial era with three poets: Jean-Joseph Rabearivelo, Jacques Rabemananjara, and Flavien Ranaivo, all three presented in Léopold Senghor's celebrated *Anthologie de la nouvelle poésie nègre et malgache* (1948). More recently, although a few Malagasy writers living outside the country have been published in France, the bulk of Malagasy literature today has remained largely unpublished, circulating locally mostly in manuscript form. Voices from Madagascar will bring a wide selection of these texts, both in French and in English, to the North American public. This issue of Zookeys deals with millipedes from Madagascar, an understudied group from a still little understood place. Here presented are the findings of a 2007 expedition as well as the results from general inventory programs undertaken on Madagascar in the last 10 years. From Madagascar, only three genera of the order Spirobolida were previously known, most of them described more than 100 years ago. To our great surprise the newly collected material included more than 37 undescribed species and no less than 12 new genera, of which 11 are exclusively based on newly discovered species. All species are endemic to Madagascar. The family Spirobolellidae is for the first time recorded from Madagascar with one endemic genus, while all other 14 known genera belong to the family Pachybolidae. Therefore, more genera of Pachybolidae are now known from

Madagascar than from continental Africa and India combined. Up to six different Spirobolida genera occur sympatric in the same forest. Three of the discovered genera contain large-bodied species with a conspicuous pitch-black blood-red colour pattern, the so-called 'Fire Millipedes'. Includes articles on international business opportunities.
