Change Leadership in Higher Education May 03

2021 Initiate innovation and get things done with a guide to the process of academic change Change Leadership in Higher Education is a call to action, urging administrators in higher education to get proactive about change. The author applies positive and creative leadership principles to the issue of leading change in higher education, providing a much-needed blueprint for changing the way change happens, and how the system reacts. Readers will examine four different models of change and look at change itself through ten different analytical lenses to highlight the areas where the current approach could be beneficially altered. The book accounts for the nuances in higher education culture and environment, and helps administrators see that change is natural and valuable, and can be addressed in creative and innovative ways. The traditional model of education has been disrupted by MOOCs, faculty unions, online instruction, helicopter parents, and much more, leaving academic leaders

accustomed to managing change. Leading change, however, is unfamiliar territory. This book is a guide to being proactive about change in a way that ensures a healthy future for the institution, complete with models and tools that help lead the way. Readers will: Learn to lead change instead of simply "managing" it Examine different models of change, and redefine existing approaches Discover a blueprint for changing the process of change Analyze academic change through different lenses to gain a wider perspective Leading change involves some challenges, but this useful guide is a strong conceptual and pragmatic resource for forecasting those challenges, and going in prepared. Administrators and faculty no longer satisfied with the status quo can look to Change Leadership in Higher Education for real, actionable guidance on getting change accomplished.

Higher Order Thinking in Science Classrooms:

Students' Learning and Teachers' Professional Development Jun 16 2022 How can educators bridge the gap between "big" ideas about teaching students to think and educational practice? This book addresses this question by a unique combination of theory, field experience and elaborate educational research. Its basic idea is to look at science instruction with regard to two sets of explicit goals: one set refers to teaching science concepts and the second set refers to teaching higher order thinking. This book tells about how thinking can be taught not only in the rare and unique conditions that are so typical of affluent experimental educational projects but also in the less privileged but much more common conditions of educational practice that most schools have to endure. It provides empirical evidence showing that students from all academic levels actually improve their thinking and their scientific knowledge following the thinking curricula, and discusses specific means for teaching higher order thinking to

students with low academic achievements. The second part of the book addresses issues that pertain to teachers' professional development and to their knowledge and beliefs regarding the teaching of higher order thinking. This book is intended for a very large audience: researchers (including graduate students), curricular designers, practicing and pre-service teachers, college students, teacher educators and those interested in educational reform. Although the book is primarily about the development of thinking in science classrooms, most of its chapters may be of interest to educators from all disciplines.

Macmillan's Magazine, 1859-1907 Jul 17 2022

Macmillan's Magazine has long been recognized

as one of the most significant of the many British literary/intellectual periodicals that flourished in the second half of the nineteenth century. Yet the first volume of the Wellesley Index to Victorian Periodicals (1966) pointed out that 'There is no study of Macmillan's Magazine' - and that lack has been only partially remedied in all the decades since. In this work, George Worth addresses five principal questions. Where did Macmillan's come from, and why in 1859? Who or what was the guiding spirit behind the Magazine, especially in its early, formative years? What cluster of ideas gave it such coherence as it manifested during that period? How did it and its parent firm deal with authors and juggle their periodical work and the books they produced for Macmillan and Co.? And what, finally, accounted for the palpable decline in the quality and fiscal health of Macmillan's during the last 25 years of its life and, ultimately, for its death? Worth includes a treasure trove of original material about the Magazine much of it

drawn from unpublished manuscripts and other previously untapped primary sources. Macmillan's Magazine, 1859-1907 contributes to the understanding not only of one significant Victorian periodical but also, more generally, of the literary and cultural milieu in which it originated, flourished, declined, and expired. *HIGH FIVE! Tribes and Territories in the 21st Century

Apr 14 2022 The 'tribes and territories' metaphor for the cultures of academic disciplines and their roots in different knowledge characteristics has been used by those interested in university life and work since the early 1990s. This book draws together research, data and theory to show how higher education has gone through major change since then and how social theory has evolved in parallel. Together these changes mean there is a need to re-theorise academic life in a way which reflects changed contexts in universities in the

twenty-first century, and so a need for new metaphors. Using a social practice approach, the editors and contributors argue that disciplines are alive and well, but that in a turbulent environment where many other forces conditioning academic practices exist, their influence is generally weaker than before. However, the social practice approach adopted in the book highlights how this influence is contextually contingent – how disciplines are deployed in different ways for different purposes and with varying degrees of purchase. This important book pulls together the latest thinking on the subject and offers a new framework for conceptualising the influences on academic practices in universities. It brings together a distinguished group of scholars from across the world to address questions such as: Have disciplines been displaced by inter-disciplinarity, having outlived their usefulness? Have other forces acting on the academy pushed disciplines into the background as factors shaping the

practices of academics and students there? How significant are disciplinary differences in teaching and research practices? What is their significance in other areas of work in universities? This timely book addresses a pressing concern in modern education, and will be of great interest to university professionals, managers and policy-makers in the field of higher education.
