Bestselling author Sue Augustine leads the reader along a clear, manageable path to reconciliation with a painful past. Relying on biblical principles and using her own heart-rending story, she points the way to a future full of hope. With compassion and empathy--and plenty of "telling-on-herself" humor--she shows readers how to... Identify, release, and change how they respond to the past Overcome the "victim" mentality Set goals for the future with passion and purpose Fears will be conquered and dreams renewed for those seeking to cut loose the baggage of the long ago. A must-read for anyone struggling with a difficult past that is harming their present and crippling their future. This book models project-based environments that are intentionally designed around the United States Common Core State Standards (CCSS, 2010) for Mathematics, the Next Generation Science Standards (NGSS Lead States, 2013) for Science, and the National Educational Technology Standards (ISTE, 2008). The primary purpose of this book is to reveal how middle school STEM classrooms can be purposefully designed for 21st Century learners and provide evidence regarding how situated learning experiences will result in more advanced learning. This Project-Based Instruction (PBI) resource illustrates how to design and implement interdisciplinary project-based units based on the REAL (Realistic Explorations in Astronomical Learning – Unit 1) and CREATES (Chemical Reactions Engineered to Address Thermal Energy Situations – Unit 2). The content of the book details these two PBI units with authentic student work, explanations and research behind each lesson (including misconceptions students might hold regarding STEM content), pre/post research results of unit implementation with over 40 teachers and thousands of students. In addition to these two units, there are chapters describing how to design one's own research-based PBI units incorporating teacher commentaries regarding strategies, obstacles overcome, and successes as they designed and implemented their PBI units for the first time after learning how to create PBI STEM Environments the "REAL" way. This book aims to improve the design and organization of innovative laboratory practices and to provide tools and exemplary results for the evaluation of their effectiveness, adequate for labwork in order to promote students' scientific understanding in a variety of countries. The papers are based on research and developmental work carried out in the context of the European Project "Labwork in Science Education" (LSE). This substantial and significant body of research is now made available in English. This latest edition of Techniques of Crime Scene Investigation examines concepts, field-tested techniques and procedures, and technical information concerning crime scene investigation. Iyer created the eklavyasai.blogspot.com blog and used it from September 2011 to play a part-time, peaceful and amicable, Indian Computer Science (CS) and Information Technology (IT) academic reform, Internet-based activist role. His focus was on improving the practice of software development in Indian CS & IT academia. But he thought that it is such a vital part of the CS & IT field and that it is so poor in many parts of Indian CS & IT academia, that he referred to his efforts as Indian CS & IT academic reform activism. Other contributors to the blog have given their views on certain topics. Main work period has been from 2011 to 2014 with a little work later, off & on. The main author is no longer active in this area. This book is aimed at helping other activists involved in improving the practice of software development in Indian CS and IT academia to get the views of the blog in a convenient form. The book may also be of interest to similar activists in other countries. About the author: Main author Ravi S. Iyer is a Physics graduate from Ruia college, University of Bombay (Mumbai) who was industry trained and later self-taught in software development. He worked in the international software industry (US, Europe, Japan, South Korea, India etc.) developing systems as well as applications software (CS & IT) for over 18 years after which he retired from commercial work. Later, mainly as a "visiting faculty", he offered free service of teaching programming courses (lab. courses) and being a "technical consultant" for student projects in a Maths & Computer Science department of a deemed university in India for 9 years. Mother Jones is an award-winning national magazine widely respected for its groundbreaking investigative reporting and coverage of sustainability and environmental issues. Part sinister fairy tale, part gothic horror novel, this unique debut pulls back the curtain on the celebrity chef's kitchen, revealing a disturbing world of ambition and brutality. Killian Lone comes from a long line of gifted cooks, stretching back to the seventeenth century, and yearns to become a famous chef himself. When he starts an apprenticeship under Max Mann, the most famous chef in London, he looks set to continue the family tradition. But the reality of kitchen life is brutal. Even his fellow apprentice, Kathryn, who shows Killian uncharacteristic kindness, can't stop his being sucked into the vicious, debauched world of 1980s fine dining, and gradually he is forced to surrender his dream. Then he discovers a dark family secret—the legacy of an ancestor who was burnt as a witch for creating food so delicious it was said to turn all who tasted it mad. Killian knows he can use this secret to achieve his ambitions and maybe, finally, to win Kathryn's affections. But is he willing to pay the price? This is Killian's confession—a strange tragedy about love, ambition and incredible food. . . For Miriam Fisher, a budding poet who reads the Oxford English Dictionary for fun, seventh grade is a year etched in her memory "clear as pain." That's the year her older sister, Deborah, once her best buddy and fellow "alien," bloomed like a beautiful flower and joined the high school in-crowd. That's the year high school senior Artie Rosenberg, the "hottest guy in the drama club" and, Miriam thinks, her soul mate, comes to live with Miriam's family. And that's the year the popular "watermelon girls" turn up the heat in their cruel harassment of Miriam—ripping her life wide open in shocking, unexpected ways. Teased and taunted in school, Miriam is pushed toward breaking, until, in a gripping climax, she finds the inner strength to prove she's a force to be reckoned with. This riveting first novel introduces readers to an unforgettable heroine, an outsider who dares to confront the rigid conformity of junior high, and in the process manages not only to save herself but to inspire and transform others. The exploration of the subnuclear world is done through increasingly complex experiments covering a wide range of energy and performed in a large variety of environments ranging from particle accelerators, underground detectors to satellites and the space laboratory. Among recent advances one has to indicate, for instance, first results obtained from space and LHC experiments and progress done in preparation of the latter experiments upgrades, including plans for the LHC machine upgrade. The achievement of these research programs calls for novel techniques, new materials and instrumentation to be used in detectors, often of large scale. Therefore, fundamental physics is at the forefront of technological advance and also leads to many applications. Among these, medical applications have a particular importance due to health and social benefits they bring to the public. Sample Chapter(s). Science highlights from the Fermi Observatory (5,046 KB). Contents: Space Experiments and Cosmic Rays Observations; Production and Propagation of Cosmic Rays in the Galaxy and Heliosphere; Dark Matter Searches, Underwater and Underground Experiments; High Energy Physics Experiments; Tracker and Position Sensitive Detectors; Calorimetry; Advanced Detectors, Particles Identification, Devices and Materials in Radiation; Broader Impact Activities, Treatments and Software Application. Readership: Post-graduate students, researchers and engineers. What happens to gender at 120mph? Are Harley-Davidsons more masculine than Yamahas? The Gendered Motorcycle answers such questions through a critical examination of motorcycles in film, advertising and television. Whilst bikers and biker cultures have been explored previously, the motorcycle itself has remained largely under-theorised, especially in relation to gender. Esperanza Miyake reveals how representations of motorcycles can produce different gendered bodies, identities, spaces and practices. This interdisciplinary book offers new and critical ways to think about gender and motorcycles, and will interest scholars and students of gender, technology and visual cultures, as well as motorcycle industry practitioners and motorcycle enthusiasts. Many projects in recent years have applied context-based learning and engagement tools to the fostering of long-term student engagement with chemistry. While empirical evidence shows the positive effects of context-based learning approaches on students' interest, the long-term effects on student engagement have not been sufficiently highlighted up to now. Edited by respected chemistry education researchers, and with contributions from practitioners across the world, Engaging Learners with Chemistry sets out the approaches that have been successfully tested and implemented according to different criteria, including informative, interactive, and participatory engagement, while also considering citizenship and career perspectives. Bringing together the latest research in one volume, this book will be useful for chemistry teachers, researchers in chemistry education and professionals in the chemical industry seeking to attract students to careers in the chemical sector. Char, Weddy, and Nuell are excited over their discovery on the strange planet Pleisto but also terrified, for the leader of their expedition, Professor Joher, has disappeared. Nuell and Weddy, Joher' children, are concerned for his safety, while Char, his research assistant, feels not only worried but responsible for all of them. He realizes that these prehistoric people may have carried off the professor—and may even have killed him. The three set out to find the professor, and their search leads them through a frightening world, where they must fight for their lives every day, against mastodons and jaguars as well as Pleisto's prehistoric inhabitants. They befriend a wounded hunter, a man who is like their own ancestors from millions of years earlier, and hope that he will lead them to the professor. As their journey progresses, Char is thrilled to have the chance to study prehistoric humans so closely, but he is disturbed by the violence of everyday life on Pleisto, by its uncomfortable similarity to life on Earth, and by his own feelings of competition and aggression. In an exciting climax, he learns about human courage, love, generosity, and cooperation. You think you are just playing a game online; masterminding the perfect crime. But something is not right. A website inviting players to come up with the perfect crime is the façade for billionaire Lawrence Hackett's real-life game of Mastermind: an invitation-only competition for a select few to see who can perform the perfect heist, and win an enormous bounty. Special Agent Mitchell Parker and his team learn the magnitude of the international crime ring and launch an investigation. Washington, London, Paris... the clock is ticking. Can they figure out the game before it is too late? Dr. Tom Gorham is a professor at Central States University located on the Mississippi River below St. Louis. One of his assignments is to secure funding for research projects in the College of Science and Engineering. Dr. John "Raj" Jhanga, a Professor of Physics, tries an experiment with an experimental powerful electromagnet with results that open a new realm in Physics. Tom's job is to coordinate the efforts to solve the dilemma of the experiment. The Navy Department lends an old escort destroyer to the University to supply added D.C. power to expand the experiment while the Pentagon tries to obtain control over the experiment as a defense project. One of their observers, an officious naval captain, interferes with the experiment and causes the experiment to blow up, sending a portion of the University back in time. Efforts to return only puts the group further into the past and the people and a portion of the university winds up in the year 1003 A.D. One of the primary problems facing the colony is the need for more people and children so the colony will not die out and the knowledge lost. Since women far outnumber men, much debate occurs as to how they can have more children when there are not enough males. This is solved by a sharing arrangement where a woman asks permission of a wife to share her husband for purposes of insemination, after which the man must have nothing more to do with the woman. This arrangement makes many women unhappy and requires modification. The colony meets the Cahokian Indians and establish a common ground of support for each other when the colonists defeat a warring Indian tribe who attack the Cahokians. Further complications arise when the Indians desire to become "one people" which requires the council members to take an Indian "princess" and some women to marry an Indian "prince." This is done to make "One People" and thus seal the pact. The people struggle to survive; scrounging seeds, food and clothing from various sources and changing cars and trucks into fanning and mining equipment. By the end of the second year the colony is in good enough shape to search for and find oil, gold, coal and iron ore. The third year they are able to send the destroyer to Europe for supplies and more people and children. The book details the efforts for the colony to survive and grow and to reshape the direction of the world by having as their primary goal education of the people. The conditions of the various countries and the living conditions in the world in 1005 A.D. are described and the history of many of the plants and foods used by Americans today. When God and the Devil make a bet, one man's soul - and the fate of the world - are caught in the middle in this debut Christian thriller. Former carpenter James Ryan has a life as close to idyllic as any typical American retiree: a nice house, a wonderful wife, a successful son, a part-time job to keep himself busy and contented. But this peaceful existence shatters one morning when a group of intruders break into James' house, locking him out while his wife, Amanda, is still asleep inside. The outcome shatters James, but his misfortune doesn't end there. God and the Devil have taken notice of him, and claiming that the modern world has no place for God, who has lately taken the form of an old woman named Verna, the Devil, taking the form of slick bar owner Ethan, challenges God to once again put a believer through a Job like test of faith. The wagers outcome could in fact deliver hell on earth. As the unlucky target James sees his life fall apart around him, Ethan opens a combination bar and arcade to lure the small town's vulnerable teenagers into his orbit and put them to use in his crusade of evil, which ultimately results in an all-out war between the teens and adults of the town. Last Call is a well-researched religious thriller which remains loyal to its characters that remain passionate and multi-dimensional throughout. It promises to appeal to a diverse audience that appreciates a literary roller coaster of twists and turns. The Kitchen Pantry Scientist: Physics for Kids features biographies of 25 leading physicists, past and present, accompanied by accessible, hands-on experiments and activities to bring the history and principles of physics alive.
