Rights: Philosophic Foundations, first published in 1977, comprehensively examines the general justifications for systems of private property rights, and discusses with great clarity the major arguments as to the rights and responsibilities of property ownership. In particular, the arguments that hold that there are natural rights derived from first occupancy, labour, utility, liberty and virtue are considered, as are the standard anti-property arguments based on disutility, virtue and inequality, and the belief that justice in distribution must take precedence over private ownership. Lawrence Becker

goes on to contend that there are four sound lines of argument for private property that, together with what is sound in the anti-property arguments, must be coordinated to form the foundations of a new theory. He therefore expounds a concise but sophisticated theory of property that is relevant to the modern world, and concludes by indicating some of the implications of his theory. The potential tax savings are massive. For example, in one case study the author shows that using a company could result in a 42% increase in your after-tax income! There are also a number of drawbacks and traps to avoid, so it's essential to arm yourself with all the relevant facts. This guide looks at the whole picture and explains all the tax consequences of using a property company. It is written in plain English and contains

dozens of examples and tax planning tips. Exploring the social and political meanings attributed to property - specifically home ownership - this study looks at how these changed during the course of the modern city building process between 1860 and 1920. Focussing on two northern European capital cities, Berlin and Stockholm, the study contributes to the understanding of various factors that shaped the dynamic urban growth that characterized this period. In this classic study, Alan Brudner investigates the basic structure of the common law of transactions. For decades, that structure has been the subject

of intense debate between formalists, who say that transactional law is a private law for interacting parties, and functionalists, who say that it is a public law serving the collective ends of society.

Against both camps, Brudner proposes a synthesis of formalism and functionalism in which private law is modified by a common good without being subservient to it.

Drawing on Hegel's legal philosophy, the author exhibits this synthesis in each of transactional law's main divisions: property, contract, unjust enrichment, and tort. Each is a whole composed of private-law and public-law parts that complement each

other, and the idea connecting the parts to each other is also latently present in each.

Moreover, Brudner argues, a single narrative thread connects the divisions of transactional law to each other.

Not a row of disconnected fields, transactional law is rather a story about the realization in law of the agent's claim to be a dignified end-master of its body, its acquisitions, and the shape of its life. Transactional law's divisions are stages in the progress toward that goal, each generating a potential developed by the next. Thus, contract law fulfils what is incompletely realized in property law, negligence law

what is germinal in contract law, public insurance what is seminal in negligence law, and transactional law as a whole what is underdeveloped in public insurance. The end point is the limit of what a transactional law can contribute to a life sufficient for dignity. Reconfigured and expanded with a contribution by Jennifer Nadler, *The Unity of the Common Law* stands out among contemporary theories of private law in that it depicts private law as purposive without being instrumental and as autonomous without being emptily formal. study of the extreme inequalities in the ownership of property, in economies across the globe. He considers a wide range of remedial policies - educational development, reformed death duties and capital taxes, demographic policies, trade union action, the socialization of property, the development of a property-owning democracy, the expansion of the welfare state.
